

New Shine Solar Cooker

Just add Sunshine!

This Solar Cooker has been designed to be used in areas where cooking fuel is scarce and the sun is plentiful. There is no longer a need to spend the whole day looking for fire wood or spending money on paraffin or kerosine. This curved concentrator cooker, or "parabolic," will cook food fast at high temperatures giving you a cleaner and less costly way of cooking food and pasteurizing water.

- ✓ Fuel is not needed saving time and money. (hours spent looking for wood to burn is at an end. No need to buy fuels which can be very costly.)
- ✓ Cooking with fire can be hazardous with the risk of burns.
- ✓ Smoke from fire causes lung and eye diseases.
- ✓ The slower, gentler cooking provided by many solar cookers preserves more nutrients.
- ✓ The ability to pasteurize water with free solar energy can help prevent many diseases.
- ✓ The energy for solar cooking is infinitely renewable and entirely non-polluting.
- ✓ Food needs little attention while cooking, leaving the cook free to attend to other matters.
